Brussels, Belgium – October 10, 2017

ADB SAFEGATE launches new software tool for successful end-to-end integration

A-Lytics is a dashboard and analytics tool that enables performance measurement to seek constant improvement within airport integration

Close on the heels of its partnership with Gentrack, the leaders in Airport Collaborative Decision Making (A-CDM) solutions, ADB SAFEGATE is gearing up to roll out a new analysis tool that will fully support the continuous improvement of airport operations. A dashboard and analytics tool, A-Lytics will depict the airport's Key Performance Indicators (KPIs) in a graphical overview so that airports and airlines have complete transparency between airfield, tower and gate to make the right decisions and implement changes based on actual operational data.

As airports focus on becoming more efficient, they need to closely monitor their daily operations as well as pay close attention to what elements influence performance. A-Lytics depicts elements including the precise time the plane docks, its on-time performance and the timings of all activities around preparing the plane for departure. Information is presented in such an easy to view manner that it allows operators to fully understand what is happening at any point of time, helping airports and airlines take corrective action and implement solutions that increase airport, airline and service provider performance and efficiencies.

"Inefficiencies at an airport are typically the result of lack of communication between different stakeholders, for example those responsible for ground handling and luggage versus others in charge of another aspect of the turnaround status. If we combine all stages of the flight process and the hidden data within the same, it can be visualized how they relate to each other and then we can have a clear view on where improvements can be made and the process can be streamlined. A-Lytics is the ideal tool to make operational efficiency, or lack of it, visible to the airport, airline, ANSP and ground handler," said **Fredrik Johansson, Senior Advisor A-Lytics.**

"This year we have made huge strides with our Airport Performance strategy that looks to break the siloed thinking between airfield, tower and gate, to emerge as the industry's leading turnkey airport integrator. A-Lytics is the newest element in our strategy to measure all the other elements of our integration approach. We have leveraged our expertise across key domains to develop a specialized data analytics tool that will become an essential feature of the airport's operational and facility management cockpit," said **Christian Onselaere, CEO, ADB SAFEGATE.**

This week, visitors to ADB SAFEGATE's stand (1420, Hall A5) at *inter airport* Europe 2017 can see a preview of the exciting new analysis tool.

About ADB SAFEGATE

ADB SAFEGATE is a leading provider of intelligent solutions that deliver superior airport performance from approach to departure. We partner with airports and airlines to analyze their current structures and operations, and jointly identify and solve bottlenecks. Our consultative approach enables airports to improve efficiency, enhance safety and environmental sustainability, as well as reduce operational costs. Our portfolio includes solutions and services that harmonize airport performance, tackling every aspect of traffic handling and guidance, from approach, runway and taxiway lighting, to tower-based traffic control systems and intelligent gate and docking automation.

ADB SAFEGATE has 900+ employees in more than 20 countries and serves some 2,500+ airports in more than 175 countries.
