

A more dynamic and responsive way to manage airport operations

Plan and allocate airport resources and flight schedules – from anywhere via one tool.

- Delays at your neighboring hub airport are creating congestion in your ground operations
- You can no longer gather all the information that you need by simply looking out your terminal window
- You're still using spreadsheets and non-collaborative methods to collate operational data
- Construction makes it trickier to plan operations and update schedules and allocations
- Unplanned events throw everything out of schedule

If you're managing operations at a small to medium-sized airport and facing any one of these problems, look no further than Airport Systems Resource Management Xpress (AS-RMSX).

The cloud-based software as a service (SaaS) AS-RMSX takes the most powerful features from our industry-leading AS-Resource Manager and packages them into a quick set-up and easy-to-use solution offering a unified view of airport resources – gates, stands and baggage reclaim stations – all in one place.

The result is a real-time, intelligent resource management solution that allows you to plan and allocate airport resources as quickly as your operational environment changes.

Easy scheduling and route planning

- Rich, dynamic visualization tools provide an accurate view of flights and resource allocation at a glance.
- Birds-eye situational awareness – airport-wide view of day-to-day operations.
- A sandbox for planning, trials and what-if scenarios on schedule changes, resources and rules.
- Comprehensive problem alerts and resolution assistance.
- Automatic responses to flight schedule changes.
- Resource status management.
- Active flight management.
- Simple rule application.
- Canned reporting with useful metrics like gate and stand usage.

Get set up quick

Online setup and configuration in the AWS Cloud gives you a fully operating platform in days with the option to scale as you grow.

Time is money

Our subscription-based SaaS solution is affordable and geared for automation, a quick setup and ease of use.

Designed for simplicity

All the critical data in one place and team members only see the information they need leaving zero chance for unnecessary distractions.

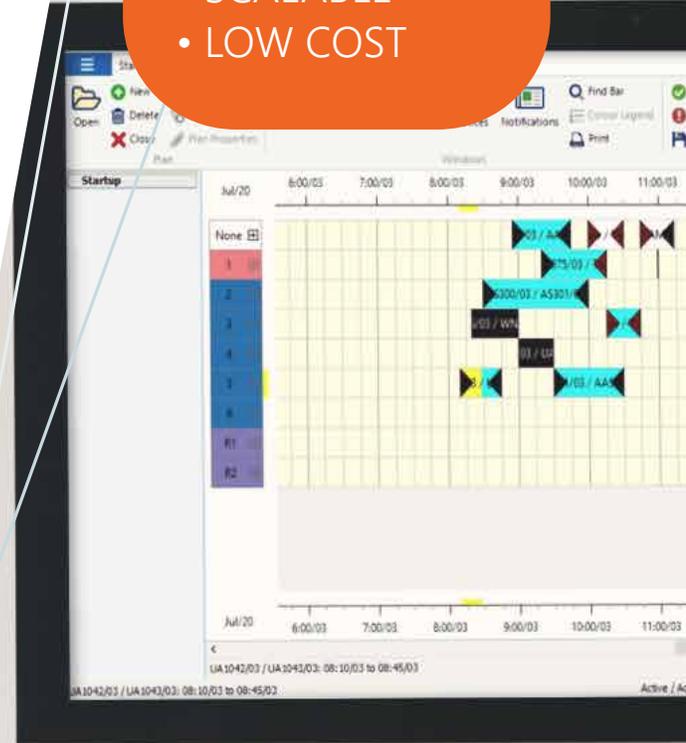

Airport Systems Resource Management Xpress (AS-RMSX)

Flight and resource planning

Optimized for small and medium-sized airports

- Deploy in the Cloud in one click or host on-site.
- Plan gates, stands, and baggage reclaim stations.
- Plan seasonal or day-of flight schedules.
- Automate seasonal schedule planning and management.
- Get a holistic view of your season; identify busiest days/hours and analyze bottlenecks at peak times.
- Easily conduct seasonal, day of, and what-if scenario planning to simulate and optimize operations during peak days and hours.
- Ensure gate and resource allocation can accommodate the aircraft you are receiving according to size, type and adjacency rules.
- Anticipate and prepare for the impact of disruptive, planned or unplanned events like sporting events, strikes or severe weather.
- Assist air carriers with resolving conflicts.
- Alert operations duty managers to problems, conflicts or upcoming events.

- QUICK SETUP
- CLOUD BASED
- SOFTWARE AS A SERVICE
- SCALABLE
- LOW COST

AS-RMSX

A simpler way to tackle operational complexity for real-time, intelligent airport resource management and growth.
