AGL+4 Product custom training

Training course

TRAINAIR PLUS™  
Bronze Member

  
**ADB  
SAFEGATE**

*The AGL+4 custom product training is a customized training event tailored to a specific installed base. The range of product covered and the depth of the course is agreed beforehand. The course can focus on the features, functionality, operation, setting, preventive maintenance, troubleshooting and repair of AGL and GATE products and systems applications. By default, we provide an extensive understanding of product safety and maintenance best practices. This course may help local teams establishing practical maintenance processes related to products and systems (in terms of spare parts, tools, frequency, etc.).*

## Training objective

The training objectives are agreed beforehand. Objectives are stated based on the following scope:

- Basic knowledge: Features, functionality, operation.
- Standard Maintenance skills: setting, calibration, preventive maintenance.
- Advanced maintenance skills: diagnosing, troubleshooting and repair.

The product safety aspects, relative to the degree of product proficiency expected from the attendees, are by default covered during every training course.

## What products can be covered?

- Airfield series circuits components
- Inset and elevated lights
- PAPI
- Constant Current Regulators & circuit selectors
- Sequential approach flashing systems & RTILs
- Airfield guidance signs
- ILCMS and AXON EQ systems
- ALCMS
- CORTEX SERVICE Airside Location-based Inspection and maintenance System
- Specific airfield equipment on request
  
- A-VDGS:
  - Safedock X
  - Safedock FleX
  - Safedock T1 & T2
- AiPRON Manager and SAM
