*An ADB SAFEGATE event #AIS2026

ADB SAFEGATE will host the [Airside Innovation Summit 2026](#) on May 6, 2026 – a new, fully virtual, global event that brings together leading airports, industry bodies, and airside operations experts to focus on real-world execution and operational clarity.

Airports today face unprecedented demands: more flights, more complexity, and ever-higher expectations for safety, efficiency, and sustainability. The challenge is no longer about visibility and data – it’s about turning insight into action.

The Airside Innovation Summit 2026 is designed to answer one crucial question:

What is actually working in live airside operations today?

A Live Global Livestream – Not Just Another Webinar

Taking place online on May 6, the Summit is a live, global broadcast built to reflect the realities of airside operations. Sessions are tailored to the way airports truly run: across regions, time zones, and real-world constraints.

This is not another theory-driven webinar – it’s a connected, operationally focused event for airport and aviation leaders, wherever they are.

Event Highlights:

- Hear directly from industry leaders: Senior executives from Aéroports de Paris (ADP), Sydney, Perth, Salt Lake City, Lima, King Salman Airport, and Dallas Fort Worth Airport will share concrete, operational insights.
- Global industry perspective: With participation from ACI World, bringing a global policy and trend outlook.
- Four innovation tracks: Covering the full airside ecosystem, including airfield, apron, tower, and operations management.
- Regional panels: APAC, EMEA, and Americas panels share grounded, real-world context.
- Live Q&A: Engage with airport leaders and ask your own questions.
- Available in 8 languages
- Real use cases: Focused on what delivers results – not just strategy decks.

Turning Data to Action

The aviation industry has invested heavily in dashboards, alerts, and predictive analytics. But true value is realized only when systems – and people – can act on those insights in real time. The Summit will spotlight how leading airports are closing the gap between data and decisive action by:

- Reducing delays, risk, and operational inefficiencies
- Turning real-time data into operational decisions
- Scaling operations without scaling infrastructure or headcount
- Integrating systems directly into daily operations

Why Attend?

The Airside Innovation Summit 2026 is designed for airport executives, operational leaders, and industry professionals seeking operational clarity and practical answers.

If you want to know what's next for airside operations – and how to make it work at your airport – this is where the conversation happens.

- Fully virtual, watch from home or office

- Concrete use cases and operational insights
- Live engagement with peers and leaders

About ADB SAFEGATE

ADB SAFEGATE is a global provider of integrated airside solutions, supporting airports, airlines, and air navigation service providers in over 175 countries. With more than 1,500 employees and a presence at over 3,000 airports worldwide, the company delivers connected hardware, software, and services that enable safer, more efficient, and more sustainable airside operations.

Through its Airside 4.0® strategy, ADB SAFEGATE helps airports transition from fragmented systems to intelligent, data-driven ecosystems. Its portfolio spans advanced airfield lighting, intelligent power and control systems, docking automation, apron management, tower and airport software, and lifecycle services. By combining operational expertise with digital innovation, ADB SAFEGATE is redefining how the airside performs — increasing resilience, optimizing performance, and accelerating sustainability across global aviation.
